

QA Analyst Take Home Assessment

Thanks for your interest in the QA Analyst role at Linq! This take-home is designed to evaluate your **attention to detail, communication, organization, and technical aptitude** using tools like Postman.

We expect the full assessment to take around **2 hours**. Please submit your work as a **GitHub repo** (or Google Drive folder if needed) with clear structure and documentation.

✓ What You'll Do

1 Test a Real Flow in Linq

We've created a test user flow in our production app for this exercise.

Your task: Explore this user experience as if you were QA'ing a new feature rollout.

 **Start here:** <https://lingapp.com/welcome>

 **Feature flow to test:** View the profile and attempt to save contact info as a visitor.

Deliverables:

- A `test-cases.md` file with a list of **manual test cases** you would run for this flow.
 - Use a simple format: `Test Case ID` , `Description` , `Steps` , `Expected Result` .
- A `bugs.md` file with any **issues or bugs** you found, written as if reporting in a real QA tool.
 - Be clear and concise. Include steps to reproduce and expected vs. actual behavior.

- Screenshots encouraged.
-

2 Use Postman to Inspect the API

Use **Postman** to simulate saving a contact or interacting with the Linq profile page from above.

If you need to simulate contact form submission or investigate network activity:

- Use **browser dev tools** and/or **Postman** to inspect what happens behind the scenes.

Deliverables:

- A `postman-notes.md` file:
 - Describe how you inspected the API call (headers, payload, response).
 - List any interesting findings, concerns, or questions you have based on the request/response.
-

3 Bonus (Optional)

These are not required, but feel free to include if you have time:

- Suggest 2–3 **process improvements** you'd propose if you joined as the first QA hire.
 - Include a short writeup on how you approach exploratory testing.
-

Submission Instructions

1. Create a **GitHub repo** for your submission.
2. Include the following files:
 - `README.md` → High-level overview of your submission.
 - `test-cases.md` → Manual test cases you wrote.
 - `bugs.md` → Bug reports or issues you found.
 - `postman-notes.md` → Notes and findings from Postman.
 - Any screenshots or attachments if applicable.

3. Make the repo public or invite `pdsullivan` as a collaborator if private.
 4. Email the link to your submission to patrick@lingapp.com and careers@lingapp.com with the subject line: **"QA Analyst Take-Home Submission – [Your Name]"**
-

Tips

- We're evaluating clarity, depth, structure, and curiosity — not perfection.
 - It's okay to ask questions in your notes if something is unclear.
 - Keep it organized and easy to read. We're excited to see how you think!
-
